The Work concept in bibliographic models from a practical (cataloguer’s) viewpoint

Szabolcs Dancs
chief advisor, head of Office for Library Standards, Hungarian Library Institute at the NSL

20th September 2022
Work: a "functional entity" to group/collocate Expressions/Instances

OK, but what is a work actually?

• What is its description about?
• What is the source of metadata?
There is as yet no commonly accepted definition of the concept [of a work].

Work. The highest level of abstraction, a Work, in the BIBFRAME context, reflects the **conceptual essence** of the cataloged resource: authors, languages, and what it is about (subjects).

Instance. A Work may have one or more individual, **material embodiments**, for example, a particular published form. These are Instances of the Work. An Instance reflects information such as its publisher, place and date of publication, and format.

Item. An item is an actual copy (physical or electronic) of an Instance. It reflects information such as its location (physical or virtual), shelf mark, and barcode.
Problem:
- Work – a concept too abstract/too misty to grasp
  - Thoughts (?), ideas (?), concepts existing in the head of the creator? (FRBR: „A work is an abstract entity; there is no single material object one can point to as the work.”)
- Work came alive when being embodied: cannot be separated from its form! (II Sapir–Whorf hypothesis: language determines thought)
- Also: Work is a tool to group Expressions/Instances. (A „functional entity”.)
- How to reconcile different approaches?

Representative expression:
- „Material embodiment of conceptual essence” – a Work captured in an Instance = (more precisely, in LRM language:) a Work captured in a Manifestation (the first edition/canonical manuscript of the Work)
- (a more philological approach)
Polemics about Work (and Expression)

• Problem:
  • Work – a concept too abstract/too misty to grasp
    • Thoughts (?), ideas (?), concepts existing in the head of the creator? (FRBR: „A work is an abstract entity; there is no single material object one can point to as the work.”)
  • Work came alive when being embodied: cannot be separated from its form! (II Sapir–Whorf hypothesis: language determines thought)
  • Also: Work is a tool to group Expressions/Instances. (A „functional entity”.)
  • How to reconcile different approaches?

• Representative expression:
  • „Material embodiment of conceptual essence” – a Work captured in an Instance = (more precisely, in LRM language:) a Work captured in a Manifestation (the first edition/canonical manuscript of the Work)
  • (a more philological approach)
„Revised event for the creation of F1 Work

In the FRBR\textsubscript{OO} model the entity type F27 Work Conception implicitly put the emphasis on the beginning of the creation process, the “spark of inspiration”, which is rarely known and documented.

The F27 Work Creation in LRM\textsubscript{OO}, on the other hand, comprises activities by which instances of F1 Work come into existence and can serve to document the period a work was coming into existence and the circumstances of it, when these are known.

In many cases Work Creation coincides with the existence of the first known complete expression of that work. This approach is closer to IFLA LRM, which models the outcomes of creation processes.”
Some crucial RE elements mapped with BF

<td>An attribute which is deemed essential in characterizing the work and whose values are taken from a representative or canonical expression of the work</td>
</tr>
</tbody>
</table>

**Scope notes**

Generally, the representative expression attribute will be typed and the types chosen will vary depending on the context of use (as given by the cataloguing rules, the nature of catalogue, or the category of work). Each of the attributes chosen may itself be multivalued. The values of these attributes are inferred either from particular expressions considered to best represent the work, or from characteristics abstracted from a more or less nebulous network of similar expressions. There is no requirement to precisely identify an expression or expressions which serves as source for the values of the representative expression attributes, nor does that expression need to be recorded in the case where it is identified.

Task for a cataloguer? Task for a researcher? Special knowledge is required!
A new entity/model???

- RE: an entity of two natures?
- is there a need for a new entity/model?

Material embodiment of conceptual essence
A new entity/model??
A new entity/model?
A new entity/model
Goal:
• depriving Work of its abstractness using RE attributes to describe it

The way to achieve it:
• instead of correction of the model:
  ▪ RE can be described by BIBFRAME elements that can be used with Work/rdfs:resource → RE described as Work using RE as source of data
  ▪ RE = canonical manuscript/first edition/group of Expressions → to be regulated in cataloguing policy
• In other words:
  ▪ cataloguing policy includes:
    „the source of the description of the Work is
    'the material embodiment of the conceptual essence'
    = RE
    = canonical manuscript or first edition
    = (when researchers' knowledge is at disposal) various Expressions as sources of RE attributes”
The West Side Story story

How to keep „abstractness” after all?

Two approaches to Work:

→ in narrow sense: e.g. Romeo and Juliet (literary work) and its translations (also literary works); including translations of translations (LRM: direvations of the Expressions of the (same) Work)

→ LRM: Expressions (of Work) – Work as a purely functional entity to group related Es

<td></td>
</tr>
</tbody>
</table>

→ in broad sense: e.g. Romeo and Juliet (literary work) and its translations (also literay works); West Side Story (musical); the fim by Zeffirelli, etc.

→ LRM: Expressions of Work and related (transformed/inspired) Works – Work as an access point to the network of related catalogued resources
LRM: „A *work* is an abstract entity that permits the grouping of *expressions* that are considered functional equivalents or near equivalents...

The essence of the *work* is the constellation of concepts and ideas that form the *shared content* of what we define to be *expressions of the same work*. A *work* is perceived through the identification of the *commonality of content* between and among various *expressions*.”
Work in the broad (abstr.) sense according to LRM
