

To: Joint Steering Committee for Development of RDA
From: EURIG
Subject: Simplification of RDA 2.7-2.10. Follow up

EURIG thanks the representative of the British Library for this proposal.

EURIG prefers scenario A because of the consistency with the new FRBR-LRM model. We are concerned about the problems for discovery and resource identification that the transcription of statements may raise; exception: for rare and early printed materials the transcription of the statement is very important for resource identification.

We would appreciate more examples and assessment of impact on cataloguing practice and discovery of resources.
