

RDA elements

April 2016

The following table gives information about the elements, element sub-types, and sub-elements used in RDA: Resource Description and Access. The elements are listed in order by the RDA instruction number in RDA Toolkit. The same information is given by order of element name in a second table. The RDA Registry (www.rdaregistry.info) contains representations of the elements in Resource Description Framework for linked data applications.

Table columns

Element

The name of the element.

Indication of element categories:

Element: A place/holder for storing values resulting from the application of RDA instructions.

- Element sub-type: A refinement of an element which narrows the meaning or scope of the element.
- Sub-element: An element which is a component of a coarser element that is an aggregation or combination of two or more (sub-)elements.

Aggregating or Super Element

The name of the element that aggregates a sub-element or is the super-type of an element sub-type.

Domain

The RDA entity that the element is assigned to. An RDA description using the element is assumed to describe something that is the same kind of entity.

Vocabulary Encoding Scheme

The RDA terminology that is recommended for the values of the element.

RDA Instruction Number

The number of the RDA instruction in RDA Toolkit that refers to the element.

Instruction Group

The name of the group of instructions that refers to the element.
